## **CITECT SCADA INTEGRATION PARTNER**

HCE PTY LTD won a major contract to migrate an on-line 12000 point redundant Citect SCADA project for an operational copper mine in NSW. Neglected for half a decade, the Citect SCADA version was now obsolete and no longer supported by Schneider Electric.

HCE invested in the appropriate hardware to setup a fully redundant demonstration Citect SCADA system in Adelaide. Migrating the system across the version 6 to version 7 milestone was achieved in just 20 days. Obsolete code and functions were re-engineered to be compatible with the new version 7 architecture. The full SCADA system was migrated and tested on version 7.2 (SP3) within 30 days.

Site wide migration and coordinated roll-out was achieved the following month with no loss in production or data downtime.

HCE have the skills, experience and expertise to develop, upgrade and migrate your Citect SCADA automation system.

Contact HCE for all your SCADA and Automation requirements.
