

HIGH VOLTAGE CERTIFICATION TESTING

HCE PTY LTD have completed a vast range of HV certification tests on both old and new protection schemes, including but not limited to, electro-mechanical protection relays, numeric relays and microprocessor based protection relays. We have secondary injection equipment capable of driving into the high burdens posed by older relays to effectively test the systems at 10x and 20x range.

HCE have the skills, experience and expertise to conduct complete HV certification testing and commissioning on most high voltage primary and secondary equipment from 1kV to 275kV.

**INSULATION / CONTINUITY / VOLT- FREQUENCY TESTING
OVERCURRENT / EARTH FAULT / VLF TESTING**

Contact HCE for all your HV commissioning requirements.
