

POWER FACTOR CORRECTION EXPERTS

Power Factor Correction.

Target PF = 0.95

HCE PTY LTD was awarded the contract to rectify an undesirable power factor on a key Water Treatment Plant in SA.

HCE was engaged based on favourable feedback received from OneSteel / Arrium (Whyalla - SA), where HCE had successfully commissioned eight ABB 415V cap banks and one Schneider 11kV cap bank.

Exceeding expectations, HCE investigated and rectified the cap bank within three days thus improving the overall site power factor from **0.64** to a desirable **0.98** on a 4MW load.

Based on official quotations received from other companies, HCE's solution saved the customer approx. \$120 000.00.

Contact HCE for all your power factor correction requirements.
